

ADDRESSVERIFICATION

Regis24's AddressVerification service ensures a fault-free collection of new clients' address data, and standardises and adjusts your master data – updated fully automatically in real time.

This makes AddressVerification an indispensable and affordable tool for every company that needs to be able to rely on correct datasets like delivery addresses or identity data and which, at the same time, would like to conserve internal data management resources.

ADVANTAGES FOR YOUR BUSINESS WITH ADDRESSVERIFICATION FROM REGIS24:

- takes the pressure off your internal departments through adjustment of master data
- reliable and rapid processing of large amounts of data in real time
- fewer returns of post or basic requests to the Residents' Register, reducing your costs
- problem-free and fast integration thanks to state of the art REST API or GraphQL API
- no minimum purchase or minimum contract period
- no ongoing running costs as with software solutions – easy to understand, enquiry-based invoicing, also possible as a prearranged quota of requests
- established and certified since 2003

HOW REGIS24'S ADDRESS- VERIFICATION WORKS, IN DETAIL:

- 1). the AddressVerification system structures, edits and validates collected data
- 2). your system sends us the query data via API, for example in real time during the course of a new customer's inputting of their address details into your shop's system
- 3). audible, written and transmission mistakes in customer databases are automatically recognised and then standardised and corrected by the system
- 4). you receive the information by API and can then use the amended and standardised addresses directly in your operating database. In this way you know straight away whether they match a valid address or whether parts of the address need to be verified
