DELIVERYADDRESSCHECK

Having the textual content of an address validated – for example, based on its plausibility – is now possible. The innovative DeliveryAddressCheck service from Regis24 protects your business from delivery address fraud and also your offer from being purchased on account.

YOUR ADVANTAGES WITH THE DELIVERYADDRESSCHECK:

- validating of the textual content of new customers' declared delivery, invoice or residential addresses

- higher acceptance rate of reviewed new customers

- minimising the risk of fraud, particularly in the area of fraud through the use of fake identities or addresses

- maximum transparency: including delivery of statistical indicators to your in-house fraud system upon request

- problem-free and rapid integration thanks to up-to-date APIs via the GraphQL interface

- real-time solutions with excellent scalability and longer running times

- efficient risk management due to economical and fast identity comparison

- integrate your individual workflows completely smoothly with the GraphQL API

- pricing on a per enquiry basis and with no licensing expenses

- no minimum purchase or minimum contract period

- established and certified since 2003

REGIS24'S DELIVERYADDRESSCHECK IN DETAIL:

Currently, Regis24's Delivery Address Check can successfully validate the address of >70% of adults in e-commerce:

- with the help of a state of the art GraphQL interface, your system starts its enquiries on the basis of pre-provided indicators like name, date of birth, and address

- there are absolutely no restrictions on the number of addresses that can be checked at the same time, since the GraphQl technology can handle several subsidiary enquiries for the same field

- for the Regis24 DeliveryAddressCheck your query is equally valid whether it applies to a full address or to a fragment of a delivery, residence or invoice address

- the IdentConnect technology examines, practically in real time, matches to the queried identity in connection with the address in diverse Regis24 databases, including Regis HIVE

- our confirmation of a delivery address is sent back to your system, whether an address (or a part of it) is already known for a queried identity or not

STATISTICAL VALUE FOR YOUR OWN ANTI-FRAUD SYSTEM TOO: WITH IDENTITYCHECK AS A PRECONFIGURED COMPONENT OF DELIVERYADDRESSCHECK.

In contrast to our competitors, IdentityCheck from Regis24 also makes available to your own in-house system the statistical indicators underlying the result. This means that your anti-fraud engine can make much more accurate and actionable decisions as a result of the Regis24-derived data values transferred to you – such as quantitative and qualitative assessments of reliability with regard to an identity – with no additional costs.
