Regis24 HIVE

Regis24 HIVE is an exclusive data pool that brings together identity-related and payment information held by different partners into one dedicated setting and that protects from any attacks, both internal and external.

This means that any identity data fed into our systems is stored by Regis24 acting as a trusted custodian. No participating party can access the raw data of any other participant. Any query is instead placed in the aggregate data pool over our modern GraphQL API.

This is a unique solution in Germany that represents nothing else than the future of AI-supported assessment of new customers, delivery address validation, and protection from payment defaults, identity thefts and online fraud.

THE REGIS24 HIVE PLATFORM, AT A GLANCE:

- a solution unique to Germany
- minimising risk and fraud with the aid of a self-contained data pool fed with data from leading companies
- data sovereignty and supremacy always remains with the respective participant companies
- peerlessly high and detailed matching rates due to the breadth and depth of the data pool
- different data points for an identity are automatically collated and contextualised
- new customers are in this way more effectively tested and systematically rated
- no minimum purchase or minimum contract period
- guaranteed to comply with DSGVO provisions
- established and certified since 2003

HOW THE DATA POOL PLATFORM HIVE OPERATES, IN DETAIL:

A variety of well-known companies bring their data into HIVE, where it combines with the entries from the Regis24 database (around 400 million at the last count). This generates a self-contained, extremely well protected data pool that is inaccessible to third parties. In this way, HIVE encompasses, among other data points, residential address data, payment information (for example, relating to reliability in making payments as well as payment sums) and delivery addresses.

HIVE participants can place identity queries with the data pool. At no time is the established plain data shared with the HIVE participants, so the data's sovereignty and autonomy always remains with the respective company.

Through the combination of the sheer amount of functioning data from the HIVE partners with the patented and AI-guided Ident-Connect technology from Regis24, the results matching for all businesses taking part is more reliable, precisely when it comes to uncovering evidence of online fraud or minimising the risk of payment defaults.

The innovative Regis24 technology has the capacity, with the aid of AI, to pinpoint, compare and immediately place into a usable context, practically in real time, diverse identity-related data points from a variety of sources. This also includes data concerning payment behaviour, plausibility, delivery addresses and movement information.

LET YOUR BUSINESS BECOME PART OF THE HIVE

Please don't hesitate to get in touch with us to see if it would suit your company to be a part of HIVE, and also what advantages this could give you in concrete scenarios.
